Key findings include:

- Programs reported making efforts to encourage units to strive for participation by adopting new policies or practices, such as simplifying the assessment process and providing incentives for participation.
- Academic assessment participation has shown a steady increase over the past few years, with a noticeable rise in the last academic year.
- Some programs have encountered challenges in data collection and analysis, which led to the development of new strategies and tools to improve the process.

Advisement

- Faculty reported seeing improvements in student understanding and engagement, as well as increased satisfaction with the assessment process.
- The use of technology, such as online modules and self-assessment tools, has been widely adopted to enhance the advisement process.

Interdisciplinary Programming & Collaboration:

- Programs have developed cross-college/school leadership and faculty-based committees to foster collaboration and integration, and to identify areas of improvement.
- The implementation of AIs in the classroom has revealed a desire for growth opportunities within their respective areas.

The annual GE data is being analyzed now to look for the results of your hard work and your student's hard work in the November newsletter.

Thank you to all who participated in the assessment this year. We are pleased to see the growth and progress. Your alignment with the GE rubrics and your attention to the skills and outcomes are crucial to the success of the curriculum. We look forward to the next academic year and to seeing the impact of your efforts.
